

How to share content with your students

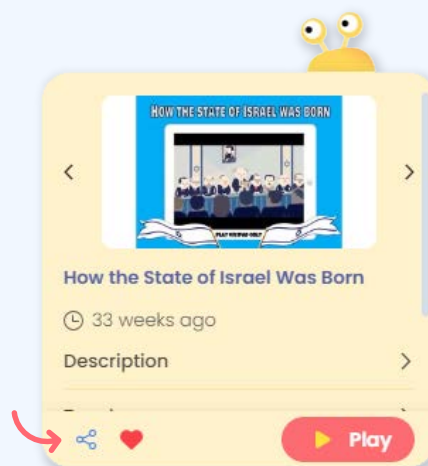

The **Sharing Options** are the same, no matter from where you share. There are several places from where you can share content:

1. From the back of the thumbnail from the search results

- You've searched for content, and now you have the list of search results, sorted according to popularity in the Jigzi system.
- When you find a JIG, playlist or resource that you want to share, click its thumbnail.

- There are 3 buttons along the bottom of the back of the thumbnail. Click the **Share** icon.

2. From within the player of a JIG

- a. Note: This applies only to the teacher player. Student players do not allow sharing.
- b. Play the JIG that you want to share.
- c. Within the player, click the JIG face to open the left-hand panel:

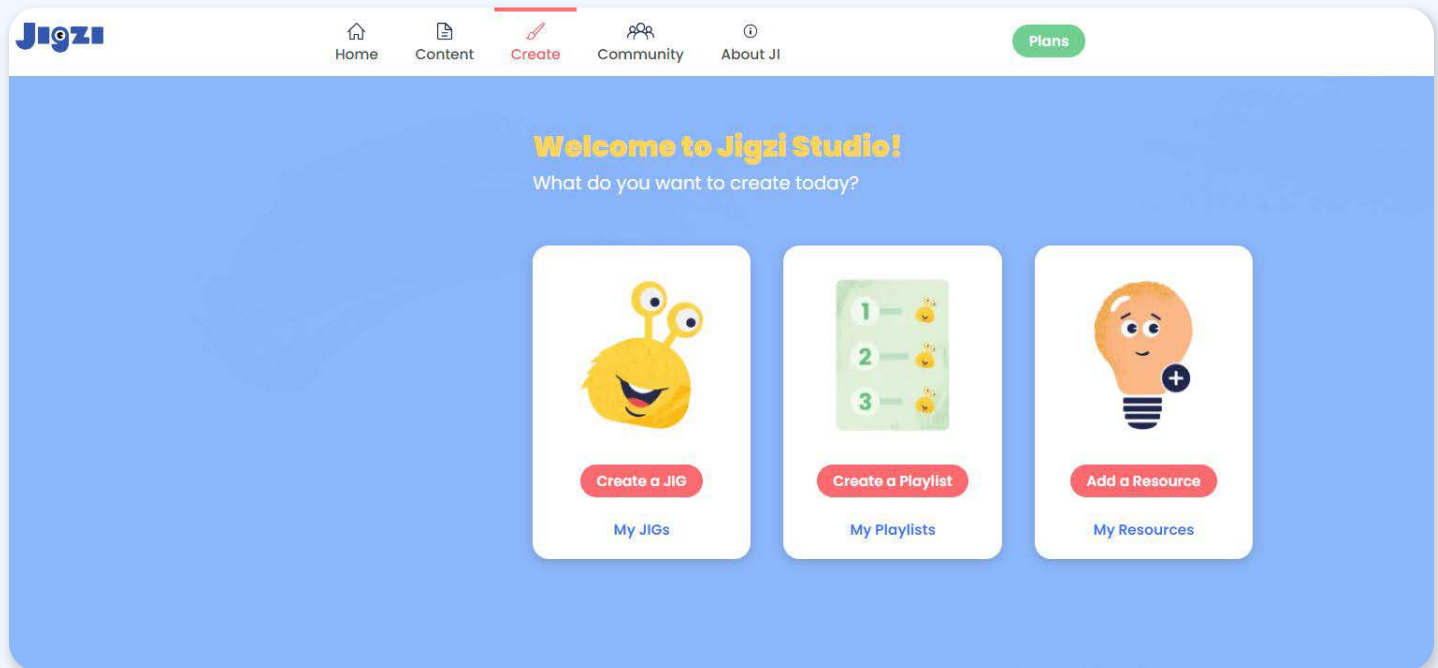

- d. You will find the **Share** icon on the top of the left-hand panel.

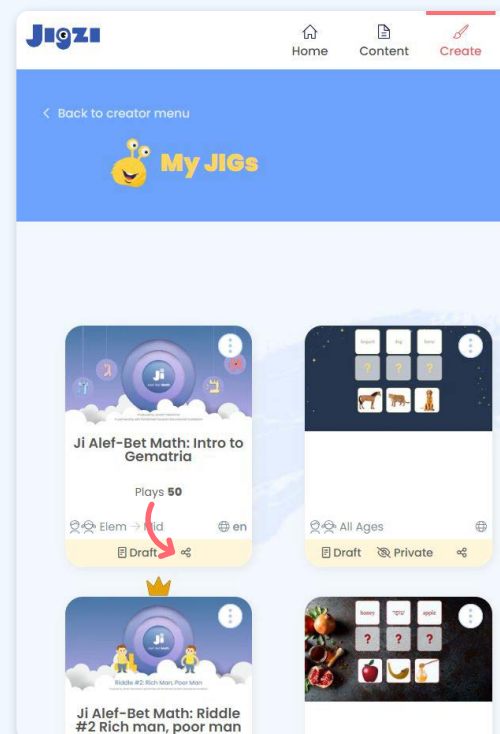

3. From your JIG gallery, where you can see all the JIGs that you are working on or have published

- Click **Create** along the top menu to open Jigzi Studio
- Click **My JIGs**

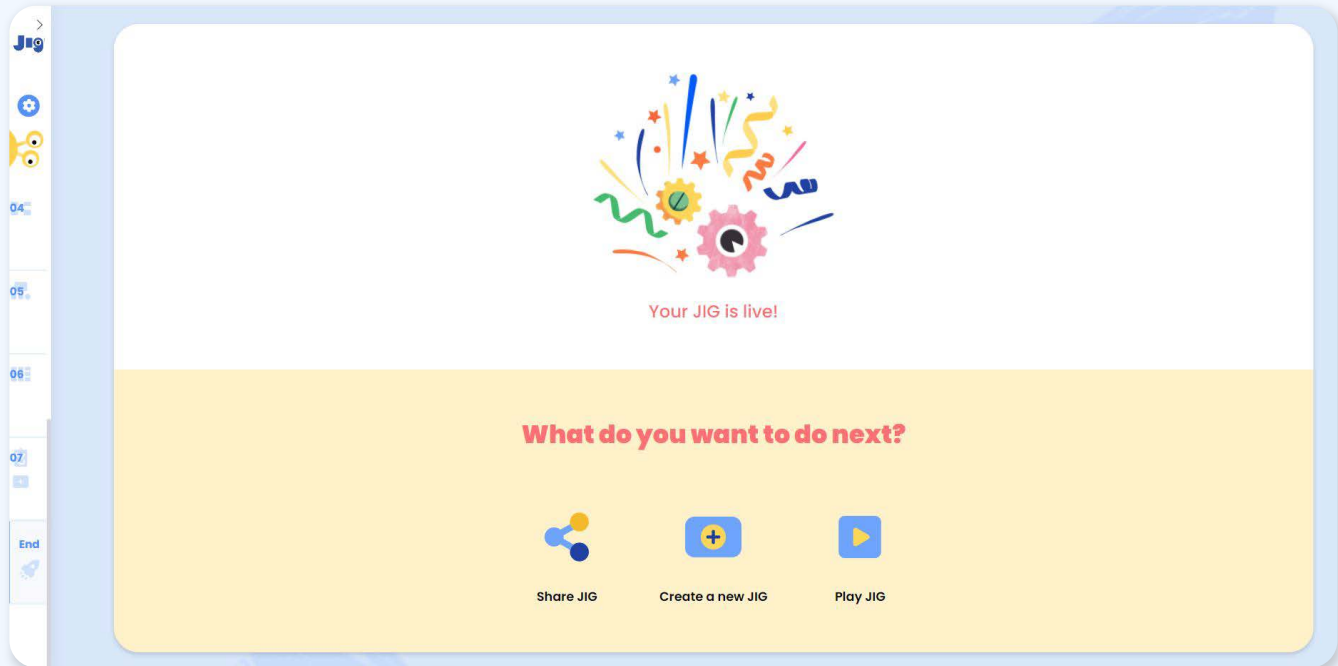

- You will see a **Share** icon at the bottom of each of your JIGs in your gallery. Click the **Share** icon.

4. From the post-publish options

- a. Once you have published a JIG that you have created, you get an option to share it
- b. Click **Share JIG**

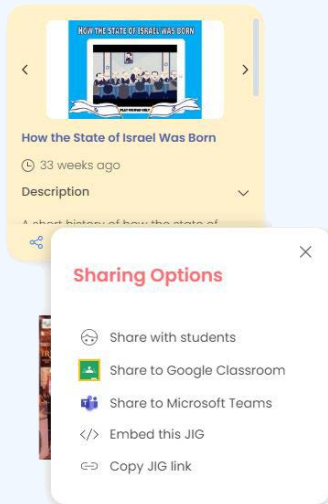

How to use the Sharing Options

1. Click the **Share** icon from one of the places described above.

2. You will now see the **Sharing Options** popup.

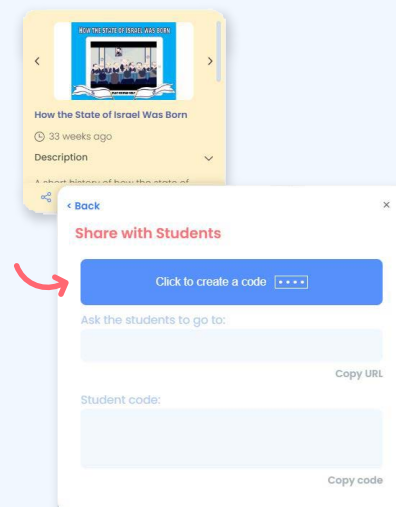

3. **Students will not need to register if you share using the student options**

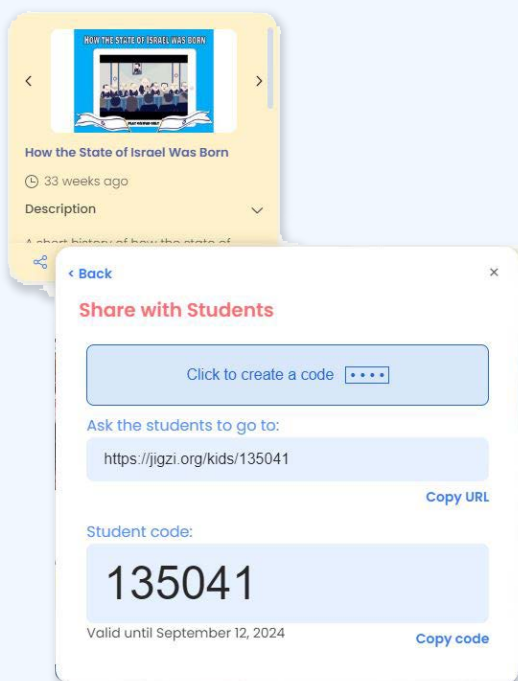

If you want to share with your students so that they can play the lesson themselves, without having to register or sign up to Jigzi, then click **Share with students**. (Sharing to Google Classroom and to Microsoft Teams will also enable students to play the lesson without the need to register.)

4. Click **Share with students**. Another popup will display, asking you to click to create a code.

5. Click the button **Click to create a code**.

6. A unique code will be generated for this lesson. In this case it is 135041.

- You can copy the URL to send to the students (Click **Copy URL**). This is the recommended route, as the URL will take the child directly to the JIG to play.
- You can copy the code and give that to your students. (Click **Copy code**). This method is great if you are in a classroom, and you tell the children to all type in the code. The students simply type in the code on the kids' site.

How to open the Jigzi Kids' site:

- The URL for the Jigzi Kids' site is <https://jigzi.org/kids>, but the easiest way for a child to reach it is to go to the Jigzi home page <https://jigzi.org>.
- On the Jigzi home page, click **Student Code** along the top of the page.

- The Jigzi Kids page opens up and the student can type in the code:
